Walnut whole (raw, calibrated 28, 30, 32)

All nuts grown and processed in Ukraine. Eco-friendly. It has a pleasant, not bitter taste. The moisture content of less than 6%. All products are carefully dried and free from foreign objects, it has no various insects and pests.

It is used for direct consumption and processing.

Halves

Walnut divided into two roughly equal parts - halves of kernel. With 85% - 90% of all selected nuts on standard – halves are whole, the other 10% - the kernel of at least 2/3 of the half.

It is used for direct consumption.

Quarters

Walnut quarters is one quarter of the kernel. All kernels divided into four roughly equal parts, a number of the selected impurity nuts allowed 10% of large pieces.. For standard quarters walnuts should not pass through the sieve apertures with a diameter of 7 mm. The average diameter of the party usually 7-20 mm.

Quarters are used for direct consumption, and in the food industry.

Eighth

Walnut eighth - a piece that is 1/8 of kernels, average diameter - 6-14 mm, with each number of the selected nuts exception of 10% of the pieces of at least 3 mm in diameter.

It is used in confectionery and bakery industry.

Small pieces

Sizes of small kernels pieces vary from 4 to 6 mm, ie the particle passes through the holes 3 mm sieve.

Smaller pieces will suit those who decided to buy walnut for use in bakery and confectionery industry, and for oil processing.

Crumb

Walnut categories crumb is a kernels part of which does not exceed the size of 3 mm. They are a by-product of the processing of walnuts and can have a different texture from "chips" to a fine powder.

Used for powder ice cream, cakes, biscuits, to add to the dough or cooking nut cream fillings, walnut crumb convenient for oil processing, cooking sauces and thickeners.

Shell

49-50% by weight of nut is his shell. Walnut shells is widely used in the pharmaceutical industry, often used as a fertilizer.

Most processors use the shell as fuel. At the same time there are a lot of more useful applications: as an abrasive, a filler for paints and cosmetics, highly efficient production of fuel pellets, as a filler in the manufacture of furniture panels, etc.

Partitions

Partitions are characterized by exceptional medical effect. They include a large supply of nutrients such as glycosides, alkaloids. In addition, the partitions are also organic acids. Partitions nuts have antibacterial, strengthening, binders, anticancer properties.

Apply for the manufacture of medicines, as well as in cosmetology.

Raw walnut oil

100% raw oil walnut obtained by cold pressing. Without artificial additives, no GMO, no preservatives.

Walnut oil contains a record number of so-called "vitamin of youth" (vitamin E), retinol, vitamin B, vitamin E and essential fatty acids Omega-3 and Omega-6. It is also rich in biologically active substances, micro and macro such as zinc, copper, iodine, calcium, magnesium, iron, phosphorus, cobalt. Cold pressed technology allows you to keep all the vitamins and biologically active substances.

100% refined walnut oil obtained by cold pressing.

His nutritional value of walnuts oil surpasses even olive oil, there are a lot of polyunsaturated fatty acids. In addition, it has a completely unique healing properties - they treated wounds and burns heal several times faster.

We take into account all the needs of customers and can pour in PET bottles of 0.25 liters., 0.5 l., As well as bottles of dark glass.

Flour of walnut

Walnut flour is made from selected whole walnut kernels grown to full maturity in the wild. To preserve dietary value and natural properties, process flour excludes heating materials. Flour of walnut - a natural dietary product containing a range of elements. Such as vitamins A, D, E, vitamins B, vitamin P, PP, K, C, macronutrients calcium, magnesium, sodium, potassium, phosphorus. Trace elements iron, zinc, iodine, copper, manganese, selenium, fluoride, cobalt and lecithin and natural volatile.

It is used in cooking, medicine and cosmetology.
